

NOV 02 2010

To EPA.

We as dairy farmers feel this proposal TMDL would have a horrific impact on the farming industry, and all infrastructure involved.

We have already contributed to a significant reduction in the watershed pollution, at our own EXPENSE. We, for religious reasons don't receive grant money, so if this proposal is implemented we could not afford to continue to farm the fields our fathers worked to leave behind for the next generation. We no longer have a profit margin left to comply with a proposal of this kind.

Also we feel there needs to be real time data used to achieve a COMMON SENSE GOAL.

IF THERE ARE NO FARMERS, THERE IS NO FUTURE
FOR THE PEOPLE OF THIS NATION.

We also feel this issue needs to be left at the State level to work with the farming community and all involved.

This proposal if set in motion will: Remove agriculture from the USA. Then we will have housing developments, malls, ect ... , and much more pollution going into the Bay.
